

PeopleSoft v9.2
Enterprise Learning Management

**PeopleSoft v9.2
Enterprise Learning Management
Training Agenda**

The PeopleSoft v9.2 Enterprise Learning Management course introduces participants to the functionality and key concepts of this stand-alone, internet-based solution that enables enterprises to deliver courses and content to learners—whether they are customers, partners, suppliers, or employees—from a variety of sources.

- High-level overview of configuration, set-up and business process aspects of PeopleSoft ELM 9.2 Application.
- How administrators set up and maintain catalog information, perform learner related tasks and track enrollment information; how a learner would search, enroll and attend learning; and how a manager would perform team related learning tasks.

Prerequisites:

- Ability to run processes and reports
- Understanding of general navigation and PeopleSoft concepts
- Familiarity with Integration Broker (recommended)

ELM Overview

ELM Implementation Best Practices

Fluid User Interface “Mobile” vs Classic Home

ELM Security

Learning Environments
