

## SPEARMC CLOUD SERVICES

### Tailored to the specific needs of PeopleSoft customers

As PeopleSoft thought leaders, we understand the technical and business challenges that our customers face in assessing, selecting, and deploying various cloud strategies. Our team of solution and infrastructure architects can help your organization crawl, walk, run and finally soar in the cloud.

- Offsite redundancy and protection from disasters
- Maintenance and upgrade advisory guidance
- On-Demand scalability of infrastructure for production, development, test, and PUM environments
- Support and enhancement resources
- Cost smoothing and capital investment reduction in hardware and licenses /fees
- SaaS ownership experience for PeopleSoft
- Reduced ERP total cost of ownership

### CLOUD READINESS ASSESSMENT

We recommend an initial assessment for our customers to explore and compare varying cloud strategies and how the business case for each applies to the goals, strengths and opportunities for improvement of the business. During this assessment, our team will gather business requirements and business drivers relating to infrastructure and change management. We will compare those requirements with the benefits of several solution offerings and cloud providers including SpearMC's proprietary Cloud Infrastructure. After a recommendation has been made, SpearMC will procure and provide your new cloud infrastructure.

### DISASTER RECOVERY

One of our most popular service offerings includes our offsite disaster recovery service. We have several sites where we can provide both Database and full Production backup services at virtually any frequency and rate of redundancy required by our clients. Our sites are secure and will meet most common regulatory requirements and will help ensure continuity of your business should the need present itself. If your needs go beyond backup, SpearMC can provide a full disaster recovery plan with an associated Service Level Agreement to provide a full up to date production environment that can be accessed from any supported browser or device.

### HOSTING & APPLICATION MANAGEMENT

SpearMC provides you with the best and brightest architects, business analysts, developers and support analysts so that you can focus on what matters most to your business. Leverage our thought leaders and our economies of scale in providing architecture for flat monthly fees. Allow us to guide your organization through many of the challenges you currently face including PeopleSoft Upgrade Manager (PUM) adoption and upgrade selection strategy, testing efficiencies, custom development or support, application training and cloud infrastructure solutions.

## CLOUD READINESS ASSESSMENT

### Let the experts at SpearMC guide you through the cloud adoption process

- Plan and identify cloud investment opportunities and related Return on Investment Calculations
- Compare business requirements with several cloud strategies and related provider value propositions
- Identify Capacity Requirements
- Optimize operating system and database with cloud integration
- Document as-is and to-be Disaster Recovery Plans and Procedures
- Advise your leadership regarding regulatory and audit implications
- Procure or Provide your new Public or SpearMC Cloud Infrastructure
- Strategize best practices to enable long-term growth strategies

## LEVERAGE THE SPEARMC CLOUD

### Increase return on ERP investment and reduce your total cost of ownership

- Move your PeopleSoft Production Environment from local servers to a cloud-based infrastructure
- Install all PeopleSoft Services to a secure cloud environment
- Perform Unit and System testing
- Load current Production Database to the new environment
- Assist users with UAT to validate all functions perform as needed
- Reduce costs of supporting internal hardware and allowing flexibility in adjusting resources as needed
- Development and testing of your PeopleSoft systems with a flat fee SLA for support

## CLOUD ARCHIVING & BACKUP

### Set your backup frequency and depth, then let us do the rest

- Using a predefined template, you can select any queries and multiple objects that meet your archiving and restoration requirements
- PeopleSoft Data Archive Manager uses PeopleSoft Query to define selection criteria from the base table
- Define archive jobs to archive data to history
- Restore jobs to restore any subset of archived data to production tables
- Upload archived dataset to a live environment that can be queried and reported
- Create custom SQL to archive custom, non-base tables and relationships
- Back up your entire Peoplesoft environment including Database, web servers, file servers, application servers, report servers as needed

## DISASTER RECOVERY

### Sleep better at night knowing we'll support the continuity of your business.

- Move your PeopleSoft Production Environment from local servers to a cloud-based infrastructure
- Installing all PeopleSoft Services to a secure cloud environment
- Perform Unit and System testing
- Load current Production Database to the new environment
- Assist users with UAT to validate all functions perform as needed
- Reduce costs of supporting internal hardware and allowing flexibility in adjusting resources as needed
- Flat fee SLA's for support, development and testing of your PeopleSoft systems
