

PeopleSoft Analytics

PeopleSoft v9.2 Kibana and Elasticsearch 201

Kibana and Elasticsearch 201 Agenda

This half-day PeopleSoft v9.2 Kibana and Elasticsearch 201 course introduces participants to Elasticsearch including installation, configuration, deployment and creation of new search definitions. The Kibana portion is geared towards the administration of Kibana which includes architecture overview, installation and configuration. Additional topics are migration between environments and security. Attendees will walk through the creation of a custom Search definition in PeopleSoft then import that into Kibana where the data can be viewed via Kibana Discover or a Visualization.

Prerequisites:

- General knowledge of PeopleSoft server architecture

Elasticsearch

- Elasticsearch Overview
- Installation Pre-Requisites
- Installation Overview
- Search Administration
 - Search Instance
 - Search Definition Deployment

Kibana

- Kibana Overview
- Architecture & Installation
- Creating new Search Index
- Code Migrations
- Security
