

# PeopleSoft Query for Functional Experts

## The Depth and Breadth of PS Query

# PeopleSoft Query for Functional Experts Agenda

This pre-conference workshop is designed to introduce PeopleSoft End Users to the many ways that PS Query can be leveraged to enhance reporting in your PeopleSoft environment. Most end users write and run PS Queries on a daily basis to extract data or review numbers from the system. Query is much more than a tool to generate online data dumps. In this session, we will introduce PeopleSoft users to some of the enhanced capabilities available in Query as well as the downstream data presentation layers that Query sources (Kibana, Pivot Grids, nVision).

The session is geared towards end users but it is not specific to any one pillar and therefore applicable to HCM, FSCM and Campus Solutions users.

The session will be broken down into 3 parts: Education, Discussion and Activity.

## Education (30-45 minutes)

- PeopleSoft Query
  - Tips and Tricks
  - Did you know?
  - Limitations
  - Proliferation throughout PeopleSoft
- Overview of PeopleSoft Reporting Tools
  - Kibana, nVision, Pivot Grids
  - Delivered content

## Discussion (30-45 minutes)

- Common reporting challenges
- Actionable insights

## Activity (30-45 minutes)

- Interactive exercise
  - Start with a data dump
  - Review it in Query
  - Follow it through to an advanced reporting visualization
